

QUIVERDAMPER (Patent Pending)

The end of vibration problems

What's QUIVERDAMPER ?

It's a new modular system that provides active and passive **insulation** of **industrial plants and machinery**.

Compared to the common marketed systems, QUIVERDAMPER provides the following **advantages**:

- **Vibration reduction** up to 90%
- Easy and **quick installation** even on working machines. The wide range available allows applications on machines with no weight limits
- Optimal space management and great **reduction of foundations costs** for new applications
- Protection of employees' health and safety from the **risks** that derive or may derive from exposure to mechanical vibrations, according to the European Directive 2002/44 EC
- **Increases the machinery productivity**
- Made with the high quality materials, such as **AVIONAL aluminium**.

The most typical applications of the press mounts QUIVERDAMPER (Patent Pending) are presses, shears and punching presses.
